DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 3-7, 9-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yeo, of record, for the reasons given in the previous action, hereby incorporated by reference. Applicants have argued that the Yeo reference fails to teach first and second gates which are arranged symmetrically around a voltage control terminal, as claimed.

However, as seen in FIG. 11 of Yeo, from which the FIG. 9 view is drawn, the gate members of the Yeo device do indeed appear to be formed in a symmetrical configuration around central voltage control terminals. To the extent that there may be a legitimate disagreement as to whether Yeo **explicitly** shows this structural configuration, the 35 USC 102 rejection has been withdrawn.

However, it does appear that the concept of forming the gate electrodes in a symmetrical manner around a voltage control terminal is within the scope of the Yeo reference, and would be obvious to one skilled in the art. Indeed, with respect to Yeo's FIG. 11 view, it would appear that the formation of the gate electrodes in a symmetrical configuration would be the simplest alternative and require a less complicated masking arrangement than to deliberately form an asymmetrical configuration.
